

What is claimed is:

1. A parabola type aqueduct comprising:

5 a washstand having a concave part for gathering water to allow a user to use the water, and a drain formed at the bottom of the concave part;

10 a plurality of discharge pipes having a plurality of outlets located at the top surface of the washstand, the discharge pipes allowing water spouting from the outlets to fall down to the concave part of the washstand while forming a parabola; and

a plurality of solenoid valves mounted on the discharge pipes respectively for controlling the amount of water spouting through the outlets.

15 2. The parabola type aqueduct according to claim 1, wherein ends of the discharge pipes are inclined to allow the outlets to be oriented toward the washstand.

20 3. The parabola type aqueduct according to claim 1, wherein the solenoid valves are controlled by a sensor type switch part mounted at a side of the top surface of the washstand.
